data flow modeling

Last modified: Wednesday, August 28, 2002

The process of identifying, modeling and documenting how data moves around an information system. Data flow modeling examines *processes* (activities that transform data from one form to another), *data stores* (the holding areas for data), *external entities* (what sends data into a system or receives data from a system, and *data flows* (routes by which data can flow).

Microsoft

Financial management solutions from Microsoft—software that helps streamline your business processes.
